PROFESSIONAL SUMMARY

Final-year B.Tech Computer Science student (7.5 CGPA) and MERN Stack Developer with 4 deployed full-stack applications covering auth systems, REST APIs, and cloud deployment. Comfortable across the entire MERN stack — from MongoDB schema design to React component architecture — and actively seeking a Software Engineer role where I can ship production-quality features from day one.

PROJECTS

ATS Resume Checker

React.js | Node.js | Express.js | REST API | Vercel

🌐 Demo 🔄 Code

- Engineered a full-stack ATS resume analysis tool supporting PDF, DOCX, and TXT uploads; REST endpoints /analyze & /generate-ats return keyword-match scores in **under 2 seconds** using streaming multipart parsing.
- Built a keyword density engine that cross-references uploaded résumés against a pasted job description, surfacing missing skills and formatting gaps — reducing manual ATS guesswork for job seekers by providing **instant, structured feedback**.
- Deployed on Vercel with **sub-1.5 s cold-start times**; implemented client-side file validation to reject malformed uploads before hitting the server, cutting unnecessary API calls by **~40%**.

GymForge — Full-Stack Fitness Platform

MongoDB | Express.js | React.js | Node.js | Tailwind CSS | JWT | Render

🌐 Demo 🔄 Code

- Architected a complete MERN fitness platform with **JWT-based auth** (access + refresh token flow), **6+ protected React routes**, AI-generated workout plans, and a persistent To-Do tracker — all wired to a single RESTful Express API.
- Designed a **MongoDB/Mongoose schema** supporting user profiles, workout history, and dynamic wallpaper preferences; deployed backend on Render with environment-based CORS config ensuring zero cross-origin errors in production.
- Reduced auth-related bug surface by centralising token validation in a custom Express middleware, reused across **all protected endpoints** — eliminating duplicate guard logic.

LeetCode Metrics Tracker

React.js | REST API | Vercel

🌐 Demo 🔄 Code

- Built a real-time analytics dashboard consuming the LeetCode public API; displays category-wise problem distribution and solving streaks with **dynamic chart rendering** — page fully interactive in **under 1.8 s** on a 4G connection.
- Implemented **client-side API response caching** (5-minute TTL) to prevent redundant network calls on repeated lookups, improving perceived performance by **~60%** for returning users.

Personal Portfolio Website

React.js | Tailwind CSS | Vite | GitHub Pages

🌐 Demo 🔄 Code

- Achieved **Lighthouse scores of 95+ (Performance), 100 (Accessibility), and 100 (SEO)** through semantic HTML, lazy-loaded assets, and optimised font loading strategy.
- Architected a **component-driven React structure** with smooth page transitions and mobile-first Tailwind layouts; **zero layout-shift** (CLS = 0) on all viewport sizes.

TECHNICAL SKILLS

Languages

Java JavaScript ES6+

HTML5 CSS3

Frontend

React.js Tailwind CSS Vite

Responsive UI Component Arch.

Backend

Node.js Express.js

REST API JWT Auth

Database

MongoDB Mongoose ODM

Core CS

DSA OOP MVC Architecture

Tools & Platforms

Git GitHub Vercel

Render VS Code

EDUCATION

GKCEM, Kolkata

B.Tech — Computer Science & Engineering Aug 2022 – May 2026
7.5 CGPA

R.B.B. High (H.S) School

Class XII — WBCHSE, West Bengal **88.60%** 2021 – 2022

R.B.B. High (H.S) School

Class X — WBBSE, West Bengal **70.57%** 2019 – 2020

CERTIFICATIONS
